Alert Detail

Medium	CSP: script-src unsafe-eval

Description	Content Security Policy (CSP) is an added layer of security that helps to detect and mitigate cer attacks. Including (but not limited to) Cross Site Scripting (XSS), and data injection attacks. The used for everything from data theft to site defacement or distribution of malware. CSP provides HTTP headers that allow website owners to declare approved sources of content that browsers allowed to load on that page — covered types are JavaScript, CSS, HTML frames, fonts, image embeddable objects such as Java applets, ActiveX, audio and video files.

Solution	Ensure that sensitive data is not available in an unauthenticated manner (using IP address white instance). Configure the "Access-Control-Allow-Origin" HTTP header to a more restrictive set of domains, CORS headers entirely, to allow the web browser to enforce the Same Origin Policy (SOP) in a manner.

Low	Strict-Transport-Security Header Not Set
Description	HTTP Strict Transport Security (HSTS) is a web security policy mechanism whereby a web server declares that complying user agents (such as a web browser) are to interact with it using only secure HTTPS connections (i.e. HTTP layered over TLS/SSL). HSTS is an IETF standards track protocol and is specified in RFC 6797.
